

SUBHRAJIT SREEDHAR TRIPATHY

ASPIRING DATA ANALYST / SOFTWARE DEVELOPER

8928410321 | Subhrajit5104@gmail.com | [LinkedIn](#) | [GitHub](#)

OVERVIEW

BCA graduate currently interning as a Data Analyst at Stratezic Solutions, working hands-on with real datasets and business projects in Excel, Python, and SQL.

WORK EXPERIENCE

Data Analyst Intern (Fresher) — Stratezic Solutions

January 2026 – Present

- Independently built and launched an **end-to-end e-commerce website** for Dobbe Foods, a food brand featured on Shark Tank India, handling everything from initial setup to final deployment using **WordPress**.
- Developed **order-raising and query-raising features** that let customers submit requests directly through the site, with every submission **captured, stored, and organized on the backend using Google Sheets** for easy tracking.
- Set up an **automated email notification system** so both the business and customers stayed informed in real time whenever a new order or query came in, reducing the need for manual follow-up.
- Designed and implemented core e-commerce functionality, including a fully working **shopping cart**, to support a smooth end-to-end buying experience for customers.
- Redesigned the website's overall visual design and layout with **improved graphics and a more interactive interface**, aimed at making the site more engaging and easier for customers to navigate.

PROJECTS

HealthScope — AI-Powered Obesity Risk Predictor | [healthscope-bzj4.onrender.com](#)

Python, Flask, scikit-learn, pandas, HTML/CSS/JavaScript, Render

- Trained and deployed a Decision Tree classifier in scikit-learn to predict obesity risk from lifestyle data, reaching **~67% accuracy against a 43% majority-class baseline**.
- Built a Flask REST API serving live model inference, with **input validation catching malformed or missing fields**.
- Chose a Decision Tree over higher-accuracy black-box models deliberately, **prioritizing explainability** for a health-screening use case.
- Kept the recommendation engine rule-based and separate from the ML model, so every suggestion **stays fully traceable back to its cause**.
- Covered the app with **15 automated tests** and deployed it live on Render with gunicorn.

Expense Tracker — Personal Finance REST API & Dashboard | [expense-tracker-app-l5gm.onrender.com](#)

Python, Flask, SQLite, HTML/CSS/JavaScript, Render

- Built a full CRUD REST API for expense records, backed by a SQLite data-access layer, **powering a live interactive dashboard**.
- Added analytics endpoints for total spend, spend-by-category breakdowns, and monthly summaries.
- Structured the codebase with clear separation of concerns so **each layer can be tested or swapped independently**.
- Covered the API with **16 automated tests** using an isolated temp database per run; deployed live on Render.

SmartRep — AI Fitness Trainer | [smart-rep-chi.vercel.app](#)

HTML, CSS, JavaScript, Firebase, TensorFlow.js, Vercel

- Engineered real-time AI pose detection using TensorFlow.js to **automatically track and count workout repetitions**.
- Implemented secure authentication with Firebase and followed the complete SDLC — requirements through deployment — and **shipped it live on Vercel**.

SKILLS

Programming Languages: Python, C, C++, Core Java, JavaScript

Data Analysis: pandas, NumPy, scikit-learn, Matplotlib, Excel, SQL, Data Visualization

Web & Backend: Flask, REST APIs, HTML, CSS, WordPress

Databases: SQLite, Firebase, MySQL basics, DBMS

Tools & Platforms: Git, GitHub, Render, Vercel, TensorFlow.js

Professional Skills: Problem-Solving, Adaptability, Quick Learner, Team Collaboration, Communication

EDUCATION

Yashwantrao Chavan Open University — Bachelor of Computer Applications (BCA)	2023 – 2026
Matruchhaya College of Commerce and Science — Higher Secondary Certificate (HSC)	2022
St. Xavier's High School — Secondary School Certificate (SSC)	2020
